

EcoArtTech's Eclipse

+ Write a Note

by MTAA on Monday, March 9, 2009 at 8:50pm

Our awesome friends Cary and Christine have released some networked art! Check it out...

"Eclipse" is a user driven, networked-art application that alters and corrupts United States national and state park images from Flickr.com based on the real-time Air Quality Index (particle pollution data) provided by the United States Environmental Protection Agency (E.P.A.) at the site www.airnow.gov.

"We visit national parks to get away from traffic and smog. But the latter can be hard to shake, even in remote, pristine-seeming places. "Eclipse", an open-source program created by Cary Peppermint and Leila Christine Nadir of EcoArtTech, will make air pollution's presence visually — and viscerally — explicit." Anna Lena Phillips, American Scientist

"Eclipse" is a 2008 commission of New Radio and Performing Arts, Inc., (aka Ether-Ore) for its Turbulence web site. [snip]
