Distributed solar energy viz

Bonding Energy

Classified under To Map ([Real-time maps](#), [MAPPING EXAMPLES-](#)), Type ([Map](#)), License ([Other](#))

<http://transition.turbulence.org/Works/BondingEnergy/>

A collaborative real-time data visualization that represents the measurements of solar energy from 7 different geographically distributed sites around New York State.

Data from each site is represented by a wedge in an animated circle. the colors in the wedges change as the data from the previous 7 days is played back: orange represents low light levels, yellow medium, & blue high. highlighted bands indicate maximum & minimum data values & a rotating line of text displays the date & time of the data being displayed in the center of the circle. shapes overlaid on the animation represent changing data relationships between & within the Sunsmile devices.
